Statinzyme may reduce and prevent side effects caused by cholesterol-lowering medications

Statinzyme is an advanced supplement that was developed by Dr. Paul Faerstein, the owner of Zuckermaier Pharmacy in Brooklyn, New York. As a second-generation pharmacist, Dr. Paul is keenly aware of the Drug Nutrient Depletion side effects caused by statins and routinely recommends dietary supplements to his customers to help reduce and prevent those side effects. Statinzyme's patented formula includes ingredients that procured separately would cost over $100.

A daily serving of two enteric-coated odorless soft gel capsules contains a patented formula of 9 important ingredients:

- Coenzyme Q10
- High Potency Fish Oil (40/20)
- Flax Seed Oil
- Natural Vitamin D3
- Evening Primrose Oil
- Resveratrol
- B6, B12 & Folic Acid

The only side effect you'll feel is feeling better!

When taken in combination with statins, in addition to aiding in the prevention of side effects, there is evidence that the ingredients in Statinzyme may also further reduce the risks of heart attacks and strokes. Statinzyme may help prevent the harmful side effects of cholesterol-lowering medications, including these statins:

- Advicor® (niacin extended-release/lovastatin)
- Altoprev® (lovastatin extended-release)
- Atorvastatin Calcium
- Caduet® (amlodipine and atorvastatin)
- Crestor® (rosuvastatin)
- Lescol® (fluvastatin)
- Lescol XL® (fluvastatin extended-release)
- Lipitor® (atorvastatin)
- Livato® (pitavastatin)
- Lovastatin
- Mevacor® (lovastatin)
- Pravachol® (pravastatin)
- Pravastatin
- Simvastatin
- Simcor® (niacin extended-release/simvastatin)
- Vytorin® (ezetimibe/simvastatin)
- Zocor® (simvastatin)

And these beta blockers:

- Toprol xl
- Metoprolol
- Metoprolol xl

- Atenolol
- Coreg
- Coreg cr
